

Trainings

Luana Academy

Sustainable training & development measures with our “Luana Academy” program

Our commitment to sustainability and social responsibility extends to all levels of our company, including the continuous development of our employees. With our “Luana Academy” program, we offer both regular training and individual development opportunities.

PRINCE2® training courses

All our project managers are PRINCE2® certified. PRINCE2® (short for PProjects IN Controlled Environments) is a widely used and recognized project management method that is particularly suitable for managing complex projects (such as photovoltaic projects). In this reporting period, the annual PRINCE2® training course took place from 12.04. to 14.04.2023 and four more colleagues successfully completed the course with certification.

Small & large drone license

The A1 / A3 drone driver’s license is proof of sufficient competence to operate drones with a relatively low hazard potential. This license is also known as EU Certificate of Competence A1 / A3. It is also known as a remote pilot certificate or small drone driver’s license. In contrast to the A1 / A3 drone driver’s license, there is also the large drone driver’s license, which is known as the EU remote pilot certificate. This can only be obtained from certified examination service providers. We train our employees and support them in taking their small and large drone driver’s license exams. In this reporting period, three colleagues successfully passed the examination for the small drone license and two colleagues successfully passed the examination for both the small and the large drone license. Their certificates are valid for 5 years.

Further training: AI for managers

Two of our employees have also completed and successfully passed the “AI for managers” course. ■
